

## Easily identify wet or condensed surfaces

### B-7530 preprinted identification material

Wet and condensed surfaces are notoriously difficult to label in a reliable way. Labels tend to get saturated and fall off quickly. B-7530 however stays attached and remains legible. It is a polyester label that offers excellent adhesion to wet and condensed metal surfaces.

- fully customisable B-7530 identification material available as signs and pipe markers
- maximise workplace safety with a reliable marker for wet and condensed surfaces
- can be applied to condensed surfaces, no need to shut down production processes
- stays attached even on temperature cycling pipes
